

Multi-Vac Your Complete Industrial Vacuum Source!

Exclusive Features And Key Benefits

Multi-Vac vacuum loaders are engineered to provide long service life with minimal maintenance attention! Consider these important factors:

- With Multi-Vac units, the dust collector bottom is open to the hopper with no internal baffles or ledges to create bridging and retard the flow of collected material into the hopper. In addition, this greatly reduces the cross contamination when handling different products.
- Multi-Vac is fitted with a positive displacement vacuum pump. As suction increases with increased material flow, Multi-Vac develops only the power required to move the material. The maximum vacuum generated is 16" hg. This is enough to flow material yet remains within the specifications of the vacuum pump manufacturers.
- By using conservative design standards with all our components we have produced a machine which will have a superior operating life span and require minimum maintenance. Consequently a 2 year warranty is furnished with all Multi-Vac Systems.
- Multi-Vac is made completely in our plant in the U.S.A. This allows us greater quality control. In addition, when custom specifications are needed, we are here to work with you.

No matter the need, you are sure to find a Multi-Vac that is perfect for your application.

Dual Inlets™

Each Multi-Vac comes standard with Dual Inlets. This feature allows for more flexible machine placement and the added convenience of allowing left or right hand pick-up.

No Tools RequiredSM Filter/Cage Removal

When service is required, our **No Tools Required** system provides immediate access to and immediate removal and replacement of filters and cages. These features can save hours over some older designs.

Multi-Vac Bag Filters/Cages

Multi-Vac Bag Filters have been proven on the widest range of materials from abrasive to high temperature and offer fast replacement. Bag Filters have no pleats to plug or bridge over which is a common problem with more costly cartridges.

Reverse Pulse Jet Filter Cleaning

Multi-Vac is equipped with an "on demand" programmable reverse pulse jet filter cleaning system for continuous operation. Multi-Vac also has a manual push-button system for offline filter cleaning.

Guarded Cam-Roll™ Air Lift System

Hopper changing is quick and easy using our Guarded Cam-Roll Air Lift System. The ease of hopper removal keeps downtime to a minimum.

Built In Level Probe

A built in level probe shuts the unit down whenever the hopper is full. A liquid high level probe is also available as an option when working with liquids.
